<sup>2</sup> Two doses given at least four weeks apart are recommended for children aged 6 months through 8 years of age who are getting

a flu vaccine for the first time and for some other children in this age group.

during shown age range.

<sup>3</sup> Two doses of HepA vaccine are needed for lasting protection. The first dose of HepA vaccine should be given between 12 months and 23 months of age. The second dose should be given 6 to 18 months later. HepA vaccination may be given to any chi d 12 months and older to protect against HepA. Children and adolescents who did not receive the HepA vaccine and are at high-risk, should be vaccinated against HepA.
